LOGICINDIA.TECH

ADVANCED TECHNOLOGY GROUP · EXECUTIVE PROFILE & RESEARCH BRIEFING

DOC-ID: LOGICINDIA-ATG-2026
OCTOBER 2026 EDITION

1. Executive Summary & Frontier Charter

logicindia.tech was established to engineer the future of high-bandwidth human-machine interaction, physical computing peripherals, and indigenous deep-tech hardware systems from India to the global frontier.

Our research labs operate across Bengaluru, Hyderabad, and Pune, focusing on three technological breakthroughs: dynamic micro-fluidic tactile actuation, zero-latency optical telemetry, and circular bio-composite materials engineered to make computational hardware a carbon-negative asset.

NATIONAL R&D RESEARCH CAMPUS FOOTPRINT

- **Bengaluru Advanced Computing & Haptics Center:** Electronic City Phase 1, Bengaluru
- **Hyderabad Semiconductor & Optical Telemetry Campus:** HITEC City, Hyderabad
- **Pune Materials & Circular Hardware Design Hub:** Hinjawadi Tech Park, Pune

2. Ongoing Core Technologies (Under Active Prototyping)

Micro-Fluidic Actuation (Haptics 2.0)

Sub-millisecond tactile texture switching dynamically tuning keystroke actuation from 35g to 85g.

Quantum-Sync Optical Telemetry

16,000 Hz optical pulse synchronization directly into ambient monitor sensors with sub-0.1ms delay.

Forged Ocean Carbon Composites

Chassis architecture utilizing marine algal binders and recovered carbon fibers (-140g net CO2e balance).

On-Peripheral 1.2W Neural Engine

Ultra-low power edge NPU running local biomechanical prediction models without cloud data dependency.

3. Official Verification & Contact Coordinates
